With the customer in the prone position greater

Comfort and rest occurs when using these pillows together by reducing the overall rotation and possible stress to the neck, and years of sleeping each night in a position that has been proven to be stressful to the neck. This pillow is designed to eliminate excess rotation and stress when sleeping in the prone position, for those who can not sleep in supine or side lying position.

1) Head Pillow Figure A: A head pillow yet not as big as a

regular pillow with a wedge like insert that would span
(square to rectangle shape)

the vertical length of the pillow, surrounded by foam

and conventional pillow stuffing. covered by conventional pillow

cover material extending out to meet the torso. wedge

pillow (circular cylinder shaped) with varying lengths as

per comfort of consumer - some as long as the entire upper

torso - some long enough to wedge the shoulder only.

The two pillows could connect by a male to female

velcro pieces under covering of both pillows when joined.

when or if pillows are not joined the male velcro extended

piece can fold onto itself.
